The Problem

Child safety seats, when installed and used correctly, can prevent injuries and save lives. Yet, hundreds of children ride unrestrained every day. Of the children 14 and under that have been killed in auto crashes, 50% were not restrained by seat belts or child safety seats.

Who Should Attend

Utah Child Safety Seat Program Coordinators, law enforcement officers, fire and EMS personnel, health care professionals, and other child passenger safety advocates.

Commitment to child passenger safety and participation in community checkpoints is a must.

Purpose

Child passenger safety has become increasingly complex and the need for people with a high level of knowledge and a standardized set of qualifications has grown. The National Highway Traffic Safety Administration standardized course for technical specialists enables you to gain knowledge and skills through hands-on practice. By attending this course you will:

- Develop child passenger safety technical skills;
- Identify and correct misuse of child restraints;
- Serve as a community/state/organization resource;
- Educate others on child passenger safety issues;
- Reduce potential liability through standardization;
- Receive knowledge and skills to meet national certification requirements.
